

SUPPLY CHAIN MANAGEMENT

Supply Chain Management (SCM) is a strategically driven, value-added process now engaged within every major industry around the world. Today's sophisticated business savvy companies rely as much on their supply chain personnel as they do their CFO to positively impact their bottom line.

Courses such as Principles of Business and Marketing, Transportation and Distribution Management, Introduction to Purchasing and Strategic SCM are complemented by a strong foundation in Communications, Accounting, and Business Law.

Student Learning Outcomes:

- Describe the basic business functions and how they interact in the business environment.
- Apply basic theories and techniques used to ensure successful business outcomes.
- Explain today's interdependent global marketplace and the impact on business
- Apply critical thinking skills to be able to recommend appropriate business outcomes in business situations.
- Employ effective communication skills.
- Apply business learning in real world business environments.
- Apply a variety of organizational best practices within a business context, such as ethical, socially responsible or diversity based practices.

The WNY Tech Academy supports students in grades 9-14 through project-based learning in unique classroom environments with an intense focus on the development of soft skills and real world connections to learning through mentorship, work site visits, and internship.

Located on the campus of Byron-Bergen schools, WNY Tech Academy serves school districts in the Genesee, Livingston, and Wyoming counties. Transportation is provided!
